· STRATEGISK METODE I PRAKSIS

Strategic Thinking in Practice

An example of first-principles commercial strategy development

DIAGNOSE · STRATEGIC ARCHITECTURE · COMMERCIAL PRIORITIZATION · EXECUTION

META-PERSPEKTIV

My Strategic Approach

Four disciplines — applied consistently across industries and problem types

01 Diagnose

Find the fundamental drivers — not symptoms

- Decompose the problem to first principles
- Separate root causes from surface effects
- Quantify the structural gap
- Identify what is actually constraining performance

02 Strategic Architecture

Build a system — not a list of initiatives

- Design interlocking capabilities
- Map reinforcing feedback loops
- Ensure initiatives compound — not compete
- One coherent model, not parallel workstreams

03 Commercial Prioritization

CLV and ROI as the ranking logic

- Rank by customer lifetime value impact
- Separate high-cost from high-return levers
- Identify quick wins vs. structural gains
- Allocate resources to causes — not symptoms

04 Execution & Governance

Strategy without implementation is analysis

- Phased roadmap with explicit risk flags
- KPI hierarchy: drivers before outcomes
- Clear ownership and decision rights
- Pilot → measure → scale — with data

01 · DIAGNOSE

Three structural constraints — one root cause

Most underperforming commercial organisations share the same three failure modes

01 Undifferentiated capability

No role specialisation

The same person sources leads, books meetings, closes sales and handles service. 50–70% of selling time is spent not selling. The constraint is structural — not motivational.

50–70%

of selling time is non-selling activity

02 Disconnected digital channel

Digital drives traffic — not conversion

The digital channel sells products at the point of first contact, when the customer is not yet ready to buy. The funnel breaks because the CTA mismatches the customer's decision stage.

1.8%

typical visitor-to-lead conversion — structural not behavioural

03 Acquisition bias over CLV

Retention economics ignored

Existing customers cost 5–10× less to grow than new customers to acquire. Without CLV as a steering metric, organisations systematically underinvest in the highest-return growth lever.

5–10×

cheaper to grow an existing customer than acquire a new one

Three capabilities — one integrated system

Each capability reinforces the others — this is a system, not three parallel initiatives

01

Capability Design

Role specialisation frees selling capacity

- Dedicated sourcing function: KPI = qualified meetings booked
- Dedicated closing function: 4 warm meetings/day in calendar
- Dedicated retention function: upsell, win-back, referrals
- Zone routing: +20–30% selling time at zero additional cost

02

Customer Journey Architecture

Digital qualifies — field closes

- CTA repositioned: 'Book advisory' not 'Buy now'
- Three-touch warm-up sequence before field contact
- Propensity score determines meeting priority
- CAC falls structurally as organic reach compounds

03

CLV as Steering Logic

Retention economics as primary growth driver

- CLV formula: avg. sale × frequency × duration × margin
- Trigger-based upsell at 6-month anniversary
- Post-delivery referral flow: 30-day trigger
- Win-back: 90-day window, churn-risk autoflow

System logic: Specialisation → More meetings → Higher close rate → More CLV → Lower CAC → Budget for retention → More referrals → Back to top

Portfolio Prioritization: effort vs. CLV impact

Not all initiatives are equal — this is the ranking logic

RANK	INITIATIVE	EFFORT	CLV IMPACT	TIME TO ROI	STRATEGIC RATIONALE
01	**Role specialisation**	Low	High	Immediate	Same people, same cost — double output through structure alone
02	**CTA repositioning (digital)**	Low	High	0–30 days	Single copy change converts traffic → leads. Highest ROI initiative in the portfolio.
03	**Trigger-based upsell & win-back**	Medium	High	30–90 days	Revenue on already-paid CAC. Zero new acquisition cost. CLV multiplier.
04	**Zone-based routing**	Medium	Medium	30–60 days	+20–30% selling time from logistics optimisation. Structural, not motivational.
05	**Referral programme (MGM 2.0)**	Medium	High	90–180 days	CAC falls 20–35% over 3 years. Best leads — trust already transferred.
06	**Organic positioning & SEO**	High	High	6–18 months	Structural CAC reduction. Requires tolerance for delayed return. Highest long-term margin.

KPI hierarchy: measure causes, not symptoms

Each KPI is a driver of the one above — not an independent target

REVENUE & EBITDA

The ultimate outcome — all three capabilities contribute simultaneously

CAPABILITY: Meetings booked · Sales/closer/day · Close rate %

Driver: role specialisation and geographic routing

JOURNEY: Visitor→lead CVR · Lead→meeting CVR · CAC index

Driver: CTA repositioning and digital qualification

CLV: Upsell rate · Repeat rate · CLV/customer · NPS

Driver: retention design, referral programme, win-back

IGNORE IN ISOLATION: CTR · Likes/reach · Headcount

These are symptoms — managing them directly causes suboptimisation

Phased roadmap with explicit risk governance

Prove the concept with data — then scale. Pilot before committing.

Phase 1

0–90 days

Stabilise & Decide

- One clear specialisation decision — no compromise
- Pilot: dedicated sourcing function in one region
- KPI: meeting booking rate vs. self-generated leads
- Digital CTA: A/B test 'Book advisory' vs. 'Buy now'

⚠️ Low technical risk. High internal resistance.

Phase 2

90–270 days

Structure & Scale

- Zone routing in CRM: travel time ↓, meetings/day ↑
- Retention engine live: upsell, win-back, referrals
- Organic positioning: category ownership in search
- Referral programme 2.0 launched with three-tier design

⚠️ SEO migration requires 6-month tolerance for results.

Phase 3

270–540 days

Community & CLV

- Community layer: pre-purchase engagement and trust
- UGC engine: systematic post-delivery content capture
- Loyalty programme: early-access, alumni network, events
- CAC index moves toward 60 (from baseline 100)

⚠️ High investment — but this is where structural margin lives.

Principle: The goal is not to revolutionise at once — it is to prove the concept with data, then scale.

»The discipline is not in finding the answer. It is in asking the right question first.«

Diagnose	Decompose to root causes — quantify the structural gap
Strategic Architecture	Build a system of interlocking capabilities — not initiatives
Commercial Prioritization	Rank by CLV impact and ROI — not internal politics
Execution & Governance	Pilot → measure → scale — with explicit risk flags
